ABOUT ME

AI Engineer with 4 years of experience building end-to-end intelligent systems in Germany and India. Strong in agentic AI, RAG, evaluation pipelines, MLOps, cloud deployment, and turning business requirements into reliable AI workflows.

SKILLS

Technical Skills

- **Programming** Python | SQL
- **AI Frameworks** LangChain | LangGraph | Hugging Face | n8n
- **Machine Learning** PyTorch | Matplotlib | Scikit-learn
- **MLOps** MLflow | Langfuse
- **Cloud** Google Cloud Platform | Microsoft Azure
- **DevOps & Containerization** Git | CI/CD pipelines | Docker

WORK EXPERIENCE

🏢 **Schwarz Digits** – Heilbronn, Germany

AI Engineer (Working Student)

[01/2025 – 03/2026]

- Built LLM workflow to validate food ingredients, replacing manual checks with measurable quality controls.
- Developed RAG-based QA pipelines using embeddings, and vector database to generate grounded answers, across 6 European countries and languages.
- Created LLM-as-a-Judge evaluation frameworks for German job references, that aligns with domain experts, helping teams compare models against clear quality criteria.
- Automated PDF information extraction with n8n and custom nodes, reducing repetitive manual processing.
- Developed an LLM-based code-analysis workflow for projects with up to 50,000 lines of code, helping developers understand legacy systems and plan migration work faster.

🏢 **Nichesolv Private Limited** – Bangalore, India

Data Scientist

[09/2020 – 09/2023]

- Deployed ML models on Microsoft Azure using CI/CD pipelines for repeatable delivery, monitoring and versioning.
- Built computer-vision pipelines for tennis stroke recognition, ball detection, and line detection.
- Developed time-series models for pump cavitation prediction, supporting earlier detection of failure patterns.
- Applied SHAP explainability method to make ML predictions easier to validate and communicate.

PROJECTS

Portfolio– AI Chatbot Multi agent RAG chatbot for interactive candidate-profile exploration with orchestration, evaluation, observability, and Google Cloud deployment, serving over 200 conversations in its first week.

Master's Thesis– Layout-Aware Metadata Extraction Metadata extraction system for scholarly PDFs; showed that small language models outperform layout-aware parsers on variable fields.

Capstone Project– Table Understanding for LLMs Table extraction pipeline preserving cell relationships for multilingual table search in RAG systems.

Responsible AI– Healthcare Prediction Explainable healthcare prediction pipeline aligned to EU AI Act principles, highlighting performance–fairness trade-offs.

EDUCATION AND TRAINING

MSc - Applied Data Science and Analytics

SRH Hochschule, Heidelberg, Germany [10/2023 – 09/2025]

Final grade: 1.5

Bachelor of Engineering - Mechanical Engineering

Visvesvaraya Technological University, India [08/2013 – 03/2020]

CERTIFICATIONS

Hugging Face– Agents Course | NVIDIA– Fundamentals of Deep Learning

LANGUAGES

English - C1 | German - B1
